Company: Creative Chaos

Location: , , Pakistan

Category: other-general

Job Summary:Do you enjoy creating and developing applications for mobile devices? Are you someone with strong computer programming skills who is seeking a creative challenge? We have an opening for an Android developer to join our development team, where you will have the opportunity to work with the best developers in the business. Use your design and code expertise to make your mark by improving or even inventing our cutting-edge services. Be part of a leading tech company, to go remote-first! Develop your career and your skills further while receiving a market-competitive pay and benefits package.Duties and Responsibilities: Design and build advanced applications for the Android platform Collaborate with cross-functional teams to define, design, and ship new features Work with outside data sources and APIs Unit-test code for robustness, including edge cases, usability, and general reliability Work on bug fixing and improving application performance Continuously discover, evaluate, and implement new technologies to maximize development efficiency Perform upgrades and maintenance while modifying existing software to improve performance, correct errors, and allow adaptation to new hardware. Recommend software upgrades for clients' programs and systems if necessary, and analyze software requirements and user needs to determine whether the system design is feasible and can be completed within time and budget constraints. Collaborate with engineers, programmers, systems analysts, and others on projects, and gather information on project capabilities and limitations, interface, and performance requirements to create optimum software. Design, develop and modify software systems, using mathematical models and scientific analysis to predict and measure possible outcomes. Store, retrieve, and manipulate data to understand system capabilities

and requirements. Direct software system testing, validation procedures, application, and system documentation and programming to ensure normal program functioning. Manage the work of technologists, programmers, technicians, and other related team members, and provide instruction on writing software code as needed. Coordinate software installation and monitor equipment to confirm specifications have been met. Managing core features of the app include services, network, database etc.
