About Wego

We're on a mission to help people discover the real value of travel — to inspire, to give more reasons, and to make it easy — for you to travel. Our company was founded back in 2005, and since then, we've imagined and created some of the most well-loved products for travelers all around the world.

Today, Wego is the number 1 travel metasearch engine in the Middle East. There are millions of users on Wego every month — people who travel for adventure, for work, for family, and many other reasons. That's why we work tirelessly to make your experience of planning & booking flights, hotels, and trips as seamless as possible.

Responsibilities:

Design, build, and enhance iOS and Android applications using Swift, Kotlin/Java, and React Native.

Develop, deploy, and maintain scalable and robust backend services/Rest APIs. Proficiency in at least one backend technology (e.g., Spring Boot, Node.js, Ruby on Rails, Laravel or relevant).

Ensure high performance and responsiveness of applications across all platforms.

Collaborate with cross-functional teams to define, design, and ship new features.

Implement automated testing platforms and unit tests to maintain code quality.

Identify and correct bottlenecks, and fix bugs to optimize application performance.

Uphold high standards in code quality through regular code reviews and adherence to best practices.

Stay abreast of emerging technologies and apply them to operational and product developments.

Basic Qualifications:

BS/MS in Computer Science, Software Engineering, or a related field.

Minimum 5 years of professional experience in full stack development, including iOS (Swift), Android (Kotlin/Java), and backend services.

Strong understanding of mobile SDKs, frameworks, and fundamental design principles.

Proficient in React.js, HTML, CSS, and JavaScript (ES6+).

Experience with RESTful APIs to connect mobile applications to back-end services.

Solid understanding of OOP, MVP, and clean architecture principles.

Experience with performance and memory tuning tools.

Proficient in code versioning tools, such as Git.

Good to Have:

Experience in backend development with Spring Boot Java

Knowledge in cloud technologies (e.g., AWS) and CI/CD pipelines.

Familiarity with Docker and containerization.

Experience with TypeScript and automated testing tools (Jest, React Testing Library, Playwright).

Agile/Scrum methodology experience.
