Inbox Business Technologies is a technology solutions and services provider that helps businesses to unify people, processes and products through agile technologies to achieve their goals. Digital Transformation is not just the way forward, rather it is an imperative, especially when it is meaningful by focusing on perfecting experiences, empowering our clients and doing all this more intelligently. Join us in this journey and help us lead, innovate and simplify. Your role: As a Network System Engineer, you will be responsible for managing in Fortinet next generation firewalls (NGFWs), network detection & response (NDR) and web application firewalls (WAF). Responsibilities: Configure, maintain, and manage firewall hardware and software to ensure network security. Implement and maintain network security measures to protect against unauthorized access, malware, and other security threats. Implement necessary rule changes, updates, and upgrades. Monitor network traffic for suspicious activities and potential threats. Optimize and maintain firewall security policies and procedures, adhering to industry best practices and regulatory requirements. Provide high-level troubleshooting support for firewall-related issues, including connectivity problems, performance tuning and security breaches. Ensure that agreed Service Level Agreements (SLAs) are being met. Work with vendor support engineers on escalation and ticket resolution along with root cause analysis (RCA). Work closely with customer to ensure a secure network environment, providing expert advice on network security issues. Keep customer updated with network security status and on-going issues. Ensure network documentation is kept up to date including LLD, HLD, network topology, configurations, and inventory. Identify discrepancies and suggest solutions to customers to improve network

security and performance.
