

Solutions Engineer

[Apply Now](#)

Company: i2c Inc

Location: Lahore

Category: architecture-and-engineering

Job Description

Primarily responsible for eliciting, analyzing, elaborating and specifying software requirements including functional, quality, usability and other nonfunctional requirements.

Studies the business context for software and product development including the business, structure, relevant systems, stakeholders and circumstances leading to the software need.

Develops requirements specifications and related artifacts.

Facilitates project team during impact analysis for software change requests.

Interacts with subject matter experts, customers and other requirements providers to elicit and clarify business requirements.

Captures project and product vision through interactions with subject matter experts and requirements providers.

Coordinates with requirements providers and Project Manager to prioritize project deliverable.

Interacts with requirement providers, Project Manager, Software Architect(s) and Teams for analysis and elaboration of requirements to appropriate level of detail.

Develops external design specification and facilitates the Architect(s) and relevant Team Leads to further refine the specification.

Facilitates the project team in forming a common understanding of requirements and resolving

conflicts on requirements.

Acts as an internal requirements provider, suggesting enhancements and improvements to products that provide competitive advantage to i2c and its customers.

Facilitates Software Architects, Quality Assurance and relevant stakeholder in requirements validation.

Participates in process definition and improvement efforts in coordination with Quality Engineering, for relevant process areas.

Responsible for information security tasks within own work scope.

We are looking for

Education:BS/MS (CS, SE, CE, IT)

Experience: 1-3 years

Skills

Good written and verbal communication including technical writing skills.

Domain knowledge of Prepaid Card, Banking Services and financial services.
